Human polynucleotide SEQ ID NO

```
cc the encoded polypeptides (AAM38642-AAM42213) with nootropic, the encoded polypeptides (AAM38642-AAM42213) with nootropic (Immunosuppressant and cytostatic activity. The polynucleotides are useful (Indiana) in the polynucleotide and the polynucleotide of the invention may be used to treat diseases of the peripheral nervous (Indiana) is peripheral nervous injuries, peripheral nervous of coalised neuropathies and central nervous system disease, such as (Internal scleen's, Parkinson's disease, Huntington's disease, amyotrophic (Internal scleen's) and Shy-Drager Syndrome. Other uses include the cutilisation of the activities such as (Inmune System suppression, activiny, Anthibin activity, cancer diagnosis and therapy, drug screening, cassays for receptor activity, arthritis and inflammation, leukaemias and constraints.

CC Note: The sequence data for this patent did not form part of the printed of the specification.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Ö
```

The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful cingene therapy. A composition containing a polypeptide or polynucleotide confidency of the invention may be used to treat diseases of the peripheral nervous confidency system, such as peripheral nervous injuries, peripheral nervous and control nervous system diseases, such as controlled controlled the controlled controlle

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1203
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1481
                         The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM3864-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and

Other uses include the utilisation of the activities such as: Immune system suppression, Activiny. Inhibin activity, chemotactic/chemokinetto activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and C.N.S disorders.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to novel human proteins (NHP) and the nucleic acids encoding them. The nucleic acids encode mammalian transporter proteins and are useful for the treatment (e.g. by gene therapy or antisense technology) of any of a wide variety of symptoms associated with biological disorders (e.g. breast and prostate cancer) or imbalances and as probes for the identification, selection and validation of novel molecular targets for drug discovery. The proteins may be used to raise anti-NHP antibodies. The present sequence encodes an NHP of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to novel human proteins (NHP) and the nucleic acids encoding them. The nucleic acids encode mammalian transporter proteins and are useful for the treatment (e.g. by gene therapy or antisense technology) of any of a wide variety of symptoms associated with biological disorders (e.g. breast and prostate cancer) or imbalances and as probes for the identification, selection and validation of novel molecular targets for drug discovery. The proteins may be used to raise anti-NHP antibodies. The present sequence encodes an NHP of the

                                                                                                                                                                                                                                                                                                                                                           correspond to known genes. The present sequence has identity with the murine NEK1 protein kinase homologue gene. The genes encode cancer associated antigen precursors.

These gene products are useful in methods for preventing, diagnosing and/or treating disorders, especially cancer, associated with abnormal expression of human cancer associated antigens. The method comprises contacting a sample from a subject with an agent that specifically binds to the nucleic acid molecule or expression product (or fragment) complexed with a human leukocyte antigen (HLA) molecule and determining the interaction between the agent and the nucleic acid molecule or the expression product as a determination of the disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human cancer associated antigen precursor DNA, clone NY-REN-55
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    AAA09328 standard; DNA; 4263 BP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      AAA09321-45 were isolated by SERBX screening from a renal cancer cell line 1973/10.4. Homology searching revealed that these clones correspond to known genes. The present sequence has identity with the murine NEK1 protein kinase homologue gene. The genes encode cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 05-OCT-1998;

primer sets for synthesizing polynucleotides, particularly the 5602 full-length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs -

WPI; 2001-318749/34.

Claim 8; SEQ ID 17341; 2537pp + CD ROM; English.

cc The present invention describes primer sets for synthesising 5602 (11-length cDNAs defined in the specification, where a primer set comprises: (a) an oligo-dr primer and an oligonucleotide complementary ct to the complementary strand of a polynucleotide which comprises one of coligonucleotide sequences defined in the specification, where the coligonucleotide comprises at least 15 nucleotides; or (b) a combination cc complementary strand of a polynucleotide which comprises a 5'-end cc emplementary strand of a polynucleotide which comprises a 5'-end cc sequence and an oligonucleotide comprising a sequence, where the coligonucleotide which comprises a 3'-end sequence where the coligonucleotide comprises a 3'-end sequence, where the cc oligonucleotide comprises a 1'-end sequence, where the cc oligonucleotide comprises a 1'-end sequence, where the cc in gene therapy. The primers are useful for synthesising polynucleotides, in gene therapy. The primers are useful for synthesising polynucleotides, caparticularly full-length cDNAs. The primers are also useful for the cc detection and/or diagnosis of the abnormality of the proteins encoded by checking easily without any specialised methods. AAH03166 to AAH13628 and Cc AAH3633 to AAH18742 represent human cDNA sequences; AAB92446 to CC AAH3633 to AAH18742 represent human cDNA sequences; AAB9246 to AAH13632 con the present oligonucleotides, all of which are used in the exemplification of the present invention.

Claim 6; Column 65-68; 38pp; Engli
XX

CI aim 6; Column 65-68; 38pp; En This sequence encodes a human protein kinase homolog (PKH) of the invention. The PKH sequences may be used in the prevention, treatment are diagnosis of diseases associated with inappropriate PKH expression such as cancers, autoimmune/inflammatory disorders and reproductive defects. They may be used to treat disorders associated with decreased PKH expression such as cancers (e.g. lymphoma, melanoma and cancers of the breast lung and prostate), autoimmune/inflammatory disorders (e.g. AIDS, asthma and diabetes mellitus), and reproductive defects (e.g. infertility, ovulatory defects, endometriosis and polycystic ovary syndrome). The DNA may be administered to treat disease by recrifying mutations or deletions in a patient's genome that affect the activity of PKH by expressing inactive proteins or to supplement the patients own production of PKH polypeptides. Additionally, the DNA may b used to produce PKH, according to standard recombinant DNA methodology, diseases the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  by inserting the nucleic acids into a host cell and culturing the cell to express the protein. Conversely, antisense nucleic acid molecules may be administered to down regulate PKH expression by binding with the cells own PKH genes and preventing their expression. The DNA, and antisense sequences may also be used as DNA probes in diagnostic assays to detect and quantitate the presence of similar nucleic acid sequences in samples, and hence which patients may be in need of restorative therapy. They may also be used to study the expression and function of PKH polypeptides and their role in metabolism. The PKH polypeptides may be used as antigens in the production of antibodies against PKH and in assays to identify the anti-PKH antibodies and attagonists by of PKH expression and activity. The anti-PKH antibodies may also be used to down regulate pKH expression and activity. The anti-PKH antibodies may also be used as adjagnostic agents for detecting the presence of PKH polypeptides in

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present cDNA sequence encodes human protein kinase homolog-6 (PKH-6). Human protein kinase homologs (PKH) and their cDNA molecules are used in the prevention, diagnosis and treatment of diseases associated with increased or decreased expression of PKH. Examples of such disorders include, cancer (e.g. adenocarcthoma, melanoma and bone, breast and liver cancer), autoimmune/inflammatory disorders (e.g. Acquired Immune deficiency Syndrome (AIDS), anaemia, asthma, Crohn's disease and multiple sclerosis) and reproductive disorders (e.g. tubal disease, ectopic pregnancy and polycystic ovary syndrome). PKH, its catalytic or immunogenic fragment are used for screening libraries of compounds in any of the drug screening techniques. PKH nucleic acids are used to generate sequences. PKH are also used as antigens in the production of antibodies against protein Kinases (PK) and in assays to identify modulators of PK expression and activity. PKH is also used in protein therapy.
                                                                                           Human protein kinase proteins and homologs, useful for preventing, diagnosing and treating cancers, autoimmune/inflammatory disorders and reproductive disorders .
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Bandman O,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       401
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  432
                                                                                                                                                                                                                                                                   Primer sets for synthesizing polynucleotides, particularly the 5602 full-length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs -
     The present invention describes primer sets for synthesising 5 full-length cDNAs defined in the specification. Where a primer comprises: (a) an oligo-dT primer and an oligonucleotide complete                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ThrGlyGluGluArgArgLySIleSerGluGluAlaAlaArgLySArgAr
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      GCTGGAATTTATTGAAAAAGATAAGGAACGGTAGGATCAGATTATTAGTT

The primer sets can be used in antisense therapy and CC in gene therapy. The primers are useful for synthesising polynucleotides, comparitually full-length cDNAs. The primers are also useful for the CC detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers are allow obtaining of the full-length CDNAs easily without any specialised methods. AAH03166 to AAH13628 and CC AAB13633 to AAH18742 represent human cald sequences; AAB92446 to CC AAB95893 represent oligonucleotides, all of which are used in the exemplification CC of the present invention.

                      AASO6701-AASO6757 encode for novel human protein kinases #1-57. The novel protein kinases have been identified as members of the tyrosine or serine/threonine kinase (PTK and STK) families. The polypucleotides encoding protein kinases and the polypeptides may be used in the prevention, diagnosis and treatment of diseases associated with

For example, they may be used to treat cancers (especially cancers of haematopoiettic origin), cardiovascular disease (e.g. atherosclerosis), metabolic disorders (e.g. diabetes), immune related diseases (e.g. rheumatoid arthritis), neurological disorders (e.g. schizophrenia), neurodegenerative disorders (e.g. parkinson's disease), inflammatory disorders (e.g. asthma), infectious disease (e.g. HIV) and reproductive disorders (e.g. infertility). Additionally, polynucleotides mooding protein kinases may be used for gene therapy and as DNA probes in diagnostic assays. The protein kinase polypeptides may be used as antigens in the production of antibodies against the protein kinases and in assays to identify modulators of protein kinase expression and activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 1947 BP; 638 A; 357 C; 455 G; 497 T; 0 other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to a method for diagnosing a disorder characterised by expression of a human cancer associated antigen precursor coded for by a nucleic acid molecule (NAM). The method comprises: (a) contacting a biological sample isolated from a subject with an agent that specifically binds to the NAM, an expression product or a fragment of an expression product complexed with an HLA molecule; and (b) determining the interaction between the agent and the NAM or the expression product as a determination of the disorder. The products and methods can be used in the diagnosis, monitoring, research, or treatment of conditions the characterised by the expression of various cancer associated antigens. The invention provides nucleic acid sequences and encoded polypeptides which are cancer associated antigen precursors expressed in human breast cancer, renal cancer, colon cancer, gastric cancer, prostate cancer and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New isolated cancer associated nucleic acids and polypeptides - isolated using sera from cancer patients, used to develop products for the diagnosis, monitoring or treatment of cancers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Cancer associated antigen; diagnosis; research; treatment; breast cancer; colon cancer; gastric cancer; renal cancer;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 775 uLeu

1 (bases 1 to 5497)

Nagass, T., Kikuno, R. and Ohara, O.

Prediction of the coding sequences of unidentified human genes; XXI. The complete sequences of 60 new cDNA clones from brain which code for large proteins

DNA research: an international journal for rapid publication of reports on genes and genomes. 8 (4), 179-187 (2001)

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              protein search, using sw model

Sequence 2. Application US/0959353

Patent No. 6200770

GENERAL IMFORMATION:
APPLICANT: Acton, Susan
TITLE OF INVENTION: NOVEL CSAPK-1 NUCLEIC A
FILE REFERENCE: MNI-050

CURRENT FILING DATE: 2000-06-14
PRIOR APPLICATION NUMBER: 09/163,115
PRIOR APPLICATION NUMBER: 09/163,115
PRIOR FILING DATE: 1998-09-28
NUMBER OF SEQ ID NOS: 15
SOFTWARE: Patentin Ver. 2.0
SEQ ID NO 2
LENGTH: 302
TYPE: PRT
ORGANISM: Homo sapiens
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      US-09-21-528-2

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                           Score
